

Door Entry at the Touch of a Button

Disabled

Elderly

Homes

Businesses

Shops

The SSP Key Fob Door Entry System gives access through wooden and composite doors at the touch of a button. It's simple to install, easy to operate and extremely affordable.

The key feature of this product is its range. From anywhere up to 30 metres away, the door can be released – whether you are inside the home or office, or approaching it from outside.

Possible Applications

The SSP Key Fob Door Entry system has many possible applications. These include:

- The person carrying bags or boxes in from the car
- The elderly person who may not easily be able to get to the door to let a relative in
- The office or school with restricted access areas
- The disabled person who may wish to let their carer in home
- The jewellery store or off-licence that wants to control who comes in the store whilst they are stood behind a counter

**Press
remote from

metres away**

**Remote
sends coded
radio signal
to controller**

**Electric
Striker plate
on frame is
released for
5 seconds**

**Door can
be easily
pushed or
pulled open**

Complete Installation in just a few easy steps

Installing SSP's Door Entry Key Fob System could not be easier. It has been developed so that:

- No training is required
- No computer software must be learnt
- No electrical expertise required (12v plug supplied with system)

The only skill that is required is the ability to follow clearly laid out instructions.

The SSP Keyless Door Entry System comprises of a small receiver unit that is fitted to the inside of the property and plugged into a standard wall socket.

Using the cable the product is supplied with, the unit is then attached to an electric door release striker-plate that will replace the existing "keep" that the household's/Office's door currently locks into.

Keep your original surface night latch	Remove this 'Keep' from door frame	Attach electric striker plate to wooden/composite door frame
eg. 	eg. 	

At the touch of a key fob button the electric striker plate releases, meaning the door can be pushed open from the outside or pulled from the inside.

From an ease of egress point of view and from a fire safety viewpoint, the door can also be opened from the inside without the key fob. As you would previously, simply pull down the arm of the night latch (Yale lock).

Pack Contains

Receiver unit

1 or 2 key fobs (depending on which product version you choose)

Electric release

Plug-in power supply

Wall plugs & screws

Installation guide

Frequently Asked Questions

What happens if I lose my remote key?

Your old door keys can act as back up. These will continue to open your front door in the conventional way.

On a next day basis, more key fobs can be ordered from SecuritySafetyProducts.co.uk. This can then be easily programmed in.

Can more key be added to the system?

Up to 6 keys can be added to system in total

If two kits are purchased, SecuritySafetyProducts can provide instructions on how up to 12 key fobs can be added

Will it work on uPVC front door?

Whilst it can be adapted, it is not really designed for this. Other products are available from SecuritySafetyProducts that can do this job.

Will it work with magnetic locks?

Yes. It the leads just need to be feed into a mag lock rather than the electric striker plate.

Can this system be integrated with an Intercom?

In short, yes. It could easily wired so when the intercom is answered, the door could be opened by a button on the handset.
