

ThermoSTOP Cover Large

Every one degree a thermostat is turned up by is proven to cost businesses between £30 and £80 a year. To combat this, by spending less than £20 on a ThermoSTOP, you could possibly save your organisation £100s if not £1000s every year.

This large ThermoSTOP lockable cover for heating controls is tough, robust and lockable. Injection moulded using clear, heavy duty polycarbonate material, the ThermoSTOP cover is designed to fit over the top of wall thermostats, controllers, energy sensors and electrical sockets to prevent tampering, damage and vandalism. It is also used by some to hold remote controls for thermostat controllers, so the controller may be easily located but only used by those authorised to do so.

Key Features

Holes in the frame allow air to circulate freely for proper operation of the protected device, whilst its interior wall prevents objects from entering inside.

All protectors have a key lock which prevents unauthorised entry.

Supplied with fixings, the covers are easy to install for either flush or surface mount applications.

Polycarbonate tested -400F (-400C) to 1200F (490C)

Package Contains:

One thermoSTOP thermostat protector
4 x screws and rawl plug for easy fitting

Installation instructions

2 keys (more keys available below for multiple users)

What our customers have said...

".....being responsible for many tenanted buildings and having bought every type of thermostat protector sold by SecuritySafetyProducts, I am convinced that this product has saved my company many £1,000s over the years.."

"....I would say these covers probably pay for themselves in less than a month in the winter months.... "

Especially useful where thermostats are located in public areas like:

Care and nursing homes
Nurseries, schools, colleges and universities
Multi-occupancy buildings
Food production areas
