

Space Saving Emergency Stop Button Covers

SSP's ingenious emergency stop button cover has been developed to prevent machinery and other work processes being falsely halted due to malicious or unintentional pushing of the emergency stop button. With stop buttons often being large mushroom-style buttons they can be easily knocked by staff and visitors as they move through that area of the building. Put simply this cover will stop this from happening.

This cut off button cover is incredibly easy to fit. Importantly the stop button itself does not have to be removed to fit this cover. Using the four screws and wall plugs provided, this can be fitted over the top of an existing emergency stop button. If there is trunking, wiring or conduit or any kind in the way, there are models with spacers available, which have removable tabs at the top and bottom to allow conduit or any kind of wiring to pass through.

Features and benefits of this emergency stop button cover

- Shows standard message stating: "In case of emergency, lift cover push button"
- Physical Barrier - prevents anyone accidentally or intentionally leaning against break glass unit
- Visible barrier - will make person think twice about lifting cover
- Compact self-contained hinge – smooth opening
- Highly durable - 3mm thick polycarbonate will not shatter at all and will withstand the severest of knocks
- Curved corners to ensure passers-by are not injured from mistakenly walking into product
- Yellow colour coding band to help people identify that it's covering an emergency stop button
- The majority of this cover is clear, to enable people to see the push button in the event of an emergency
- Simply attached using four button head screws and wall plugs provided
- Polycarbonate tested to withstand as little as minus 40°C and as much as 49°C (120°F)
- Three-year guarantee against breakage of polycarbonate in normal use

Internal Width 96mm

Internal Height 104mm

Internal Depth 32/62/82mm

External Height 185mm

External Depth 37/67/87mm

Delivery: Usually 1-2 working days.

Why not change the message?

For a small additional cost you may change the text shown on the front of your call point cover.

Other features available:

Alarm - Extra loud 96 decibel alarm that will sound as soon as the cover is lifted. This will attract the attention of all those around and act as a significant deterrent to the would-be perpetrator. With these a silencer key is supplied so authorised personnel can carry out maintenance work on the emergency push button without the alarm sounding.

Break seal – further deterrent to malicious actions and shows when push button has been pressed or tampered with
