Easy-Fix Sign Banding Instructions

Step 1
Insert the two piece saddle into the sign's channelling. If your sign doesn't have channelling, SSP can supply retro-fit rails

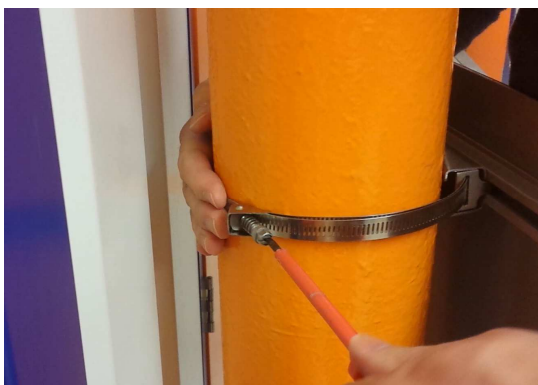

Step 2
Feed the banding through the saddle and out of the other side, creating a loop

Step 3
Feed the banding through its screw clip at the rear of the post

Step 4
Finally, clip the screw into position and tighten. Repeat for the other strip of channelling and the sign will hold its own weight
