Extra Secure 5-Lobe Pin Security Screws

A4-70 Stainless Steel is a high tensile strength stainless steel with excellent corrosion resistance making it perfect for both internal and external applications.

It is widely used as the preferred material for all applications across the health and medical sector because of its non-reactive qualities.

It is used in the manufacture of medical surgical instruments and in the pharmaceutical industry where reaction vessels have to be clean beyond reproach - the addition of molybdenum to its composition provides the A4 grade with a greater level of corrosion resistance making it suited to use in salt water or certain chemical solutions.

A favourite for high torque applications.

- Stocked in A4-70 Stainless Steel
- Stocked in Countersunk and Button Head versions
- Stocked in AB Type Self Tapping and Machine Screws
- Full range of tooling also available from stock

5-Lobe Pin for higher security

The **5-Lobe Pin** security drive offers improved tamper resistance (rated level 2 for security) compared to the more commonly available 6-Lobe Pin drive (rated level 1); as the tooling is more specialised and as a result harder for members of the general public to obtain.
