

Fire Alarm Call Point Frangible Locking Cover

This unique locking Call Point Cover has been developed to eradicate malicious false fire alarms. Unlike SSP Direct's standard call point covers, this product offers an actual barrier against malicious alarms as well as a visual one.

Incorporating a frangible lock, the person wishing to maliciously or perhaps absent-mindedly lift the call point cover is met with real resistance when they try to raise the cover up to press the alarm call point. However, it is important to note the frangible lock will break when lifted with genuine force in an emergency (Replacement frangible lock can be bought in packs of ten at the link below)

Another feature with this frangible lock is they can be released with the snake eye security key provided. This means the call point can be serviced/tested without breaking and wasting the existing frangible lock.
