

Emergency Break Glass Frangible Locking Cover

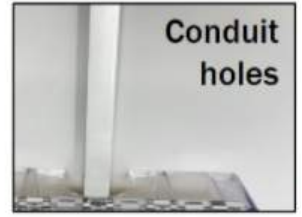

This unique locking door release button cover has been developed to stop unauthorised staff or visitors from pressing the emergency door release break glass unit.

Incorporating a frangible lock, this cover is designed to be fitted around your break glass button. The lid then locks over the top of the break glass unit.

Those with a key can easily open the cover and press the break glass unit as required. This may be to service the device or in case of a genuine emergency.

However, if an unauthorised person does not have a key and maliciously (or perhaps absentmindedly) tries to lift the cover, they will be met with real resistance.

The lock itself is made from plastic. If genuine force is applied, the lock is designed to ultimately break. However, the person

Key locking

Each cover is supplied with a two pronged key

Simply turn key 90 degrees to open cover

In an emergency, when considerable force is put on lifting the cover, the frangible lock in the front will break giving user access to button

Replacement locks available

Ideally, all responsible members of your team should be given a key to ensure easy access to buttons and reduce unnecessary lock breakages.
